

Homework Week 1 Thursday

Simplify the equation and solve using the two-steps from yesterday (Show your work)

1. $x + 3(x + 4) = 20$

2. $6(y - 1) + 8 = 32$

4. $5(k - 2) - 8k = -34$

5. $2 = 11 + 3(m + 3)$

7. $4a - 2(a + 9) = 6$

8. $7 - 4(d - 3) = 23$

10. $5 = 6(q - 5) - 19$

11. $3(3 - y) + 1 = 31$

13. $5(4n - 4) = -60$

14. $2(3t - 8) - 4t = 10$
